Amendments to the Specification:

Please delete previous abstract at page 32 of the replacement specification submitted May 6, 2002, and add the following new abstract:

Systems, methods, and computer program products for streaming video data to a user. In one implementation, the video includes first video data and second video data. The user is allowed to fast-forward the first video data but is not allowed to fast-forward the second video data. The first video data is stored on a first member of data storage and the second video data is stored on a second member of the data storage. In one implementation, a module is operable to read the video data from a first and a second portion of a virtual partition, and to refuse a request to fast-forward any video data stored on the second portion.

The new abstract is provided as a separate sheet attached to the reply.

Please amend the title to read as follows:

STREAMING VIDEO DATA WITH FAST-FORWARD AND NO-FAST-FORWARD PORTIONS
